**Foldschool - Rocker, Chair, Stool**

Lightweight, recyclable and not averse to the odd splash of paint, cardboard proved the perfect material for Swiss architect Nicola Enrico Stäubli's collection of surprisingly resilient DIY seats for kids. A clear statement against the high price tag of contemporary design furniture, Foldschool cuts out all steps of the sales and production process and invites enthusiasts to get busy themselves. With all patterns and instructions available on the Internet free of charge, assembly requires no more than a cutter, ruler, paper, cardboard, glue, masking tape and a modicum of aptitude. The result: a unique and ergonomically shaped piece of children's furniture that demonstrates that simplicity and elegance are by no means exclusive. Choose from stool, chair or rocker.
